

EU Textile Digital Product Passport — Readiness Checklist

The EU's Ecodesign for Sustainable Products Regulation (ESPR) will require Digital Product Passports for textiles and apparel. The delegated act is expected around 2027, with mandatory compliance phasing in from 2028 — earlier for larger brands, later for SMEs. The longest-lead-time task is collecting and verifying data from your suppliers, so starting now is the advantage.

Phase 1 — Confirm scope

- ☐ Confirm you sell physical textile/apparel products into the EU (applies to non-EU brands too).
- ☐ Identify which product categories are likely in the first textile delegated act.
- ☐ Check overlapping regulations (EUDR for leather, Battery Regulation for electronic accessories).
- ☐ Note the expected timeline for your business size (large brands ~2027–2028, SMEs ~2028–2029).

Phase 2 — Inventory your product data

- ☐ List every data field you already hold per product (composition, origin, care).
- ☐ Identify gaps against expected DPP fields: fibre composition & percentages, recycled content % and feedstock origin, country of manufacturing per production step, durability information, substances of concern.
- ☐ Flag which data you have vs. which must come from suppliers.

Phase 3 — Collect supplier data (the long pole)

- ☐ Map your tier 1–4 suppliers for each product.
- ☐ Request material certificates, recycled-content proof, and manufacturing-origin documentation from each supplier.
- ☐ Decide how you'll store the evidence behind each claim (this is what makes a passport audit-ready vs. just a data page).
- ☐ Set a recurring process — regulatory substance lists update, and suppliers change.

Phase 4 — Plan the technical carrier

- ☐ Decide your data carrier (QR code is standard) and where it lives (product, label, or packaging).
- ☐ Ensure the identifier is persistent and the passport stays accessible over the product's life.
- ☐ Decide build-vs-buy: in-house infrastructure vs. a purpose-built DPP platform.

Phase 5 — Keep it accurate

- ☐ Treat DPP as an ongoing process, not a one-time project.
- ☐ Re-verify supplier data on a schedule.
- ☐ Keep evidence attached to each claim so you can respond to a market-surveillance request.

When you're ready to generate real, verified passports from this data, OriginPass automates it inside Shopify — including attaching supplier evidence to each claim.
